New WolfVision presentation and lecture capture solutions on Show at InfoComm 2014

Booth #C9508. WolfVision's complete range of presentation technology and lecture capture solutions will be on show at InfoComm 2014, including the latest VZ-9.4F and VZ-9.4L Desktop Visualizers, and VZ-C6 Ceiling Visualizer - three advanced but exceptionally easy-to-use systems that each provide the centerpiece for unique and highly effective customizable imaging solutions, enabling the flexible and efficient handling and distribution of multimedia presentation content.

All-in-one lecture capture solution

In addition to the ability to display both 'live' and external content material from a wide variety of sources, these Visualizer systems feature onboard HD video recording with audio, enabling the capture of complete multimedia presentations and lectures. Recordings are not limited to the Visualizer's own camera, and external display material from connected PC's or tablets, such as digital images, PowerPoint, PDF's, or webpages, can also be easily captured, including audio, and also streamed to computers, tablets, or smartphones if required. All three Visualizers offer integrated WLAN, 8GB internal memory plus additional USB stick memory expansion, and HDMI input and output.

Bring Your Own Device

Syncing an iPad wirelessly with a VZ-9.4 Series or VZ-C6 Visualizer using WolfVision's vSolution Connect software enables it to be used as a multimedia control dashboard. Fourth generation VZ-8 Series systems can also sync with iPads and add wireless connectivity by using the BYOD Pack upgrade option. In addition to the display of 'live' Visualizer material, all media types, such as videos, charts and graphs, and PDFs, etc. are then easily integrated into a presentation and controlled using a single device. Material stored either on the iPad or in Dropbox can be displayed seamlessly to audiences, and webpages are also easily shown on-screen to audiences simply by navigating to them using the in-app web browser.

A Live Image Preview shows exactly what the audience sees on-screen, and wireless connectivity allows presentations or lectures to be delivered from anywhere in the room. vSolution Connect also gives users the option to record entire presentations including any external content (eg. PDFs, videos, PowerPoint, etc.) including audio, and save them directly to the iPad's internal memory. **Booth #C9508.**
